ALCHEMY
TECH GROUP

Alchemy Technology Group is an industry leading IT advisory, consulting and reseller firm focused on end user experience, security, cloud and automation.

Workshop Overview

As organizations continue to adopt public and hybrid-cloud, a well-defined identity strategy is critical to realize the cost optimization, increased security and operational efficiencies. Conversely, a poorly designed identity architecture can increase operational costs, decrease security and hinder agility and innovation. Understanding what, why and how to properly plan for an identity strategy is an important step to achieve success.

Alchemy Technology Group, Inc. (Alchemy) has developed a comprehensive Identity Strategy Workshop that allows us to review your current and future business objectives, compliance and governance requirements and develop the right strategy that allows for operational and cost efficiencies while remaining secure and compliant.

Methodology
Workshop Details

Workforce Identity and Access Management
  • Access Management Scenarios
  • Single Sign-On & Multi-Factor
  • Authentication Scenarios (B2B)

Consumer Identity and Access Management
  • Onboarding/Offboarding
  • Single Sign-On & Multi-Factor
  • Authentication Scenarios (B2C)

Identity Governance and Administration
  • Identity Lifecycle
  • Entitlement Management
  • Audit/Reporting/Compliance

Privileged Identity/Access Management
  • Endpoint
  • User/Service Accounts
  • Remote Access

Gap Analysis

Alchemy will review the information gathered during the discovery phase and develop a comprehensive gap analysis that identifies areas that will need to be addressed in order to implement a fully mature Identity program. Alchemy will review the gaps from both an operational and security perspective and will cover people, process, and technology. Each gap will be classified based on the criticality and a detailed recommendation will be provided.

Outcome

A roadmap will be developed that outlines the components that should be implemented to meet the requirements of the Identity program. This will include process implementation, staffing recommendations, and technology solutions that should be reviewed to determine if the technology will meet both current and future business objectives. This roadmap will take into considerations any constraints discovered during the engagement and can be used for scheduling and budgeting processes.

Deliverables
  • Gap Analysis
